Professional Summary

Software engineer with proven experience building payments infrastructure and enterprise integrations in fintech environments across Africa. Currently operating as a sole engineer — owning the full stack from backend systems and data analytics platforms to infrastructure and deployment. Actively developing skills in data engineering, networking, and applied analytics, with a research interest in learning analytics. I bring a combination of delivery track record, architectural ownership, and a deliberate, data-driven approach to technical decisions.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, SQL, PHP

Frameworks: Django, Spring Boot, Node.js, React

Data & Analytics: pandas, SQLAlchemy, MySQL, SQL Server, Jupyter

Infrastructure & DevOps: Linux, Docker, Nginx, GitHub Actions, CI/CD, Let's Encrypt SSL

Networking: MikroTik, reverse proxies, VLANs (CCNA-level), port forwarding

APIs & Integration: RESTful APIs, SOAP, Mojaloop SDK, Active Directory, Workday

Tools: Git, GitHub, Jira, Trello, MkDocs, Redis, Celery, RabbitMQ

Professional Experience

Software Developer | GS Cash Advance Ltd

Mar 2026 – Present

Sole developer across a multi-branch operation, responsible for all internal systems, infrastructure, and data.

- Designed and built an internal ticketing system from scratch using Django, Celery, and Redis — with async email notifications, role-aware dashboards, and custom permission flows — after evaluating and rejecting an inherited legacy solution.
- Built an internal analytics platform querying a vendor loan management database via read-only SQL Server access, featuring consultant performance dashboards (date-range filtering, weighted scoring) and branch-level reporting.
- Developed a staff welfare contributions system (Django) with a dual-mode architecture: read-only upload snapshots and a live editable contributions section with inline panel UI.
- Set up and maintained infrastructure: Nginx reverse proxy, Let's Encrypt SSL, MikroTik port forwarding, and a Zabbix network monitoring portal.
- Established a centralized internal documentation site using MkDocs with automated GitHub Actions deployment via rsync.

Full Stack Developer | iZyane InovSolutions

Jan 2024 – Dec 2025

Progressed from Junior to Full Stack Developer within 6 months.

- Led end-to-end development of platform features across backend and frontend, from design through to deployment.
- Integrated enterprise systems including Active Directory and Workday, enabling secure data exchange and cross-platform workflow automation.
- Implemented Role-Based Access Control (RBAC) in Django to support permission-driven access across user groups.
- Authored and maintained technical documentation for integrations and internal systems.
- Conducted code reviews and contributed to engineering standards; collaborated across QA, DevOps, and Product.

Job Shadow Intern | ZICTA (Zambia ICT Authority)

Apr 2018 – May 2018

- Observed system administration operations; gained exposure to IT infrastructure, helpdesk workflows, and network basics.

Key Projects

Middleware Engineer — COMESA DRPP Regional Payment Switch

- Designed and developed core connector middleware enabling interoperability between banks, mobile money operators (MTN, Airtel), and the COMESA Digital Regional Payment Platform (DRPP) Switch.
- Implemented integrations using the Mojaloop SDK Adapter, translating Mojaloop payment flows into institution-specific core banking and mobile money operations.
- Applied Agile and DevOps practices including CI/CD with CircleCI, automated testing, and pre-commit hooks.

Payments Integration Engineer (Contract) — GamSwitch, The Gambia

Client engagement via Caylor Enterprises for Reliance Financial Services.

- Built core connector middleware integrating a DFSP core banking system with the GamSwitch National Payment Switch using REST APIs.
- Delivered interoperability between the DFSP and national payments infrastructure, meeting switch certification requirements in collaboration with client technical teams.

FleetSmartTicketing — Smart Ticketing & Fleet Management Platform (Thesis Project)

- Built a secure backend in Spring Boot exposing RESTful APIs for passengers, staff, buses, routes, digital wallets, and reservations.
- Implemented a QR-code digital wallet with cashless payment, JWT authentication, and RBAC.
- Developed a staff mobile app in Flutter for offline-capable trip management and ticket validation.
- Deployed on Ubuntu 22.04 using Docker, Docker Compose, and Nginx with HTTPS; CI/CD via GitHub Actions.

Education

BSc Computer Science (Software Engineering) | University of Zambia Feb 2022 – Nov 2025

Graduated May 2026. Thesis: FleetSmartTicketing (Spring Boot, Flutter, Docker, RabbitMQ, Lenco payments).

Trade Certificate — Automotive Electricity & Electronics | Lusaka Business and Technical College 2021

Professional Certifications

- ICTAZ Certified Member
- CCNAv7: Introduction to Networks — Cisco Networking Academy
- NDG Linux Essentials — Cisco Networking Academy
- IT Essentials: PC Hardware & Software — Cisco Networking Academy
- Introduction to Instant and Inclusive Payments — Digital Frontiers Institute
- Teaching Methodology — University of Zambia

Volunteering

Web Volunteer — Prince Takamado Japanese Language School (2026) Built, Funded and maintain the school's public website. — <https://princetakamadoprimaryschool.com/>
